

DRAFT BOARD GRID 1 of 2 — ROUNDS 1–8, IN THE ORDER THE ROOM TAKES THEM

JUG, slot 8 · market [espn_projections_2026_20260907_1258.csv](#) · built Sep 07 2026, 12:59 · **the 12 keepers are already out of this pool**, so these cells are 12 deep of real picks — a public ADP board is not. Column headings are draft slots; only slot 8 is yours. **EACH CELL IS WHERE THE OTHER ELEVEN MANAGERS ARE EXPECTED TO TAKE THAT PLAYER — not where our board ranks him. Different on purpose: this page answers WHEN you have to act, the board answers WHO is worth most. Our own ranking, by tier, is the TIER SHEET. Through round 8 the engine's ordering is the answer** — at pick 8 take the highest VOR on the board, and at pick 32 take the engine's #1 rather than override it. No margin is quoted for pick 8 because the size of that edge was retracted; WHO to take is settled, HOW MUCH better he is, is not. Use this sheet to see the shape of a round and spot a run, not to pick.

■ RB ■ WR ■ QB ■ TE · Value on the left, price on the right. Top-left is **VOR** — points above a replacement starter at his position. His rank inside that position sits under the name; the overall pick is top-right. Grey VOR means below replacement (72 of 144 cells); ranking those against each other is noise. · **Q / D / OUT / IR** = ESPN injury status. · Odd rounds run left→right and even rounds right→left, so your cells stay in column 8.

MARKS THAT CAME FROM A MEASUREMENT

★ **One of the five worth taking at pick 32.** Take whichever shows first — across a hundred simulated drafts all five came out within three dollars of each other. Do not agonise. **This is the hardest number on the page.** · - \$n **NOT one of the five, and clearly behind** by that much. The board may show him within a point of them; he is not close. Both marks are drawn only in rounds 2–4, where that decision lives.

3/3 **A back carrying all three signals that measure** — a real share of his team's targets, 13+ games last year, and drafted in the NFL's first three rounds. Each signal is worth roughly twelve points. · **1/3** one of the three, or none. · **N% snaps** **A receiver who was off the field a lot last year** — bottom quarter of the league. The strongest receiver warning on this page.

+5 / -4 / *SNY* **This cell was moved by something your league actually does**, measured across five of its drafts — not an opinion (49 of 144 cells). **WR +5: receivers last three to seven picks longer here than the national market says.** That is the real tendency in your league and it is the one that helps you. **TE +5** on the first tight end off the board. **QB -4** early. **RB moves by nothing** — that is its measurement, not an omission. The "RB-heavy league" is real as an experience; the mechanism is receivers falling, not backs flying. *SNY*: Josh Allen is drawn at 9, **not 17** — Snyder picks 9 and 16 and has taken him every time he was there. He reaches your 17 about three times in a hundred.

MARKS THAT ARE SOMEBODY'S OPINION — useful for what to read, never a reason to draft.

BUY the analyst sweep called him a buy (34 cells). · **AVOID** don't draft at this price · **DISC** worth taking later than this cell — 5 and 32 of them here, drawn where they are likely to be offered. · ■ **on the VALUE LADDER** — board, analysts and depth chart all point at one name. A shortlist to read, not a ranking to obey.

▲▲ strongly bull · ▲ lean bull · ♦ split · ▼ lean bear · ▲ a bull case with nobody arguing the other side — on the 54 players anyone bothered to write about. **Do not read ♦ as "interesting."** The six rankers mostly agree with each other, and the players they argue about have finished **worse**, not better.

TWO NUMBERS THAT OVERRIDE WHAT IS BESIDE THEM

The number at the end of the grey line is the room's slot minus ours, drawn at 10 or more. **+33 the room takes him thirty-three picks later than we rank him** — you can wait, he is the cheap one. **-13 he goes thirteen picks earlier than we would take him** — reach or lose him. Same number on both

grids.

→±n This player's VOR is out of date and the blue number is the right one. The projections are frozen and cannot be rebuilt before the draft, so a few cells are badly stale — MarShawn Lloyd reads –90 and is really –44, at your pick 89. Read the blue, not the black. Same source as the printed OVERRIDE CARD. · NEWS OUT = the news overrides removed him; drawn only because somebody in the room will still spend the pick.

AND ONE THING NOT TO DO WITH THIS PAGE. Value and price sit side by side, and the gap between them is not a signal. "Big value, late pick, therefore bargain" has been tested twice and came back backwards both times. Read VOR down a round to see where the value falls off; do not hunt gaps with it. Nothing here is coloured by that gap, on purpose. A cell is a neighbourhood (give or take twelve picks), a column is nothing — only column 8 is yours. It stops at round 12 because only 144 of 480 players carry a real draft position, and your 152 and 161 are the defense and the kicker. The live board is what you draft from.

DRAFT BOARD GRID 2 of 2 — ROUNDS 9–12, THE ROOM'S ORDER — WHERE YOU DECIDE

JUG, slot 8 · market [espn_projections_2026_20260907_1258.csv](#) · built Sep 07 2026, 12:59 · **take risk from round 9, never before.** Swinging for upside all draft long costs you \$22 to \$41; swinging from round 9 on is free. So these cells are twice the height and spend it on what the decision turns on. **Everything here is below replacement** — that is not a reason to skip it, it is why the ordering stops helping and the job flag starts. **Buy the job, never the name.** The flag says a job is unresolved and what it is worth. Across nineteen unsettled backfields it has *no* opinion on who wins it, and neither should you.
