

DRAFT BOARD GRID 1 of 2 — ROUNDS 1-8, IN THE ORDER THE ROOM TAKES THEM

JUG, slot 8 · market **unknown (adp_vintage.txt unreadable)** · built Sep 06 2026, 17:39 · the 12 keepers are already out of this pool, so these cells are 12 deep of real picks — a public ADP board is not. Column headings are draft slots; only slot 8 is yours. **EACH CELL IS WHERE THE OTHER ELEVEN MANAGERS ARE EXPECTED TO TAKE THAT PLAYER — not where our board ranks him. Different on purpose: this page answers WHEN you have to act, the board answers WHO is worth most. Our own ranking, by tier, is the TIER SHEET. Through round 8 the engine's ordering is the answer — pick 8 is closed on WHO — St. Brown is the engine's #1 in every board state anyone has run — but \$4.2 v7.2 RETRACTED the size of that edge, so no margin is quoted here. At pick 32 you take its #1 rather than override it. Use this sheet to see the shape of a round and spot a run, not to pick.**

RB WR QB TE · value left, price right: top-left is VOR (points above the replacement starter at his position, \$4.1), his rank in that position under the name, overall pick top-right. VOR greys below replacement — 72 of 144 cells are, and \$0.3 says ranking below replacement is noise. · Q/D/OUT/IR = ESPN injury status · odd rounds run left→right, even rounds right→left, so your cells stay in column 8.

FOUR MARKS, STRONGEST FIRST — they are not equal. ★ the only names \$7 ranks at pick 32, in dollars over 100 board states (N=2,000): spread across all five is \$2.7 — take whichever shows first, do not agonise. **Hardest number here.** · —\$n the same test's other half: CI-clear behind those five by that much. Both shown only in rounds 2–4, where that decision lives. · on the **VALUE LADDER** — board, analysts and depth chart point at one name. **A shortlist to research, not a ranking to obey** (three tests found no link, sign slightly backwards). · **AVOID** don't draft at this price · **DISC** worth taking later than this cell — **5 and 32 of them inside these 144 cells**, your mines, drawn where they are likely to be offered.

THE LAST TWO MARKS ARE OPINION, NOT MEASUREMENT, AND THE PROJECT HAS TESTED THEM. **BUY** = the analyst sweep flagged him as a buy (34 cells). **3/3** RB: all three measured signals — target share, 13+ games, NFL rounds 1–3 (doc 191: +12.2 per signal, p=0.0008) · **1/3** one or none · **N% snaps** WR/TE in the BOTTOM quarter of 2025 snap share (doc 197: +0.79 points of beat per point of share, p<0.0001).

THE NUMBER AT THE END OF THE GREY LINE is the room's slot minus ours, drawn at 10 or more: **+33** the room takes him THIRTY-THREE PICKS LATER than we rank him — you can wait, and he is the cheap one · **-13** he goes THIRTEEN PICKS EARLIER than we would take him — reach or lose him. Same number on both grids, same meaning. ▲ strongly bull · ▲ lean bull · ◆ genuinely split · ▼ lean bear · ▲ a bull case written with no counter-case — which way the written case leans, on the 54 players anyone bothered to write one for. **Do not read ◆ as "interesting":** the six-ranker panel is closer to one opinion measured six times (mean pairwise r 0.81), and **disagreement, controlling for price, predicted finishing WORSE — -0.244, p=0.0009**. These marks tell you a case exists and where to read it; they are not a reason to draft anyone.

+5 / -4 / SNY = this cell was moved off its market price by a measured league tendency, not an opinion (50 of 144 cells). **Measured properly: actual pick minus KEEPER-ADJUSTED ADP, five seasons, n=680 true selections. WR +5** — receivers last **3 to 7 picks LONGER** here than the market says, significant in all three bands (+3.5, +6.6, +5.8; n = 53/80/103). **This is the real tendency in your league, and it is the one that helps you. TE +5** at the top (the first TE off the board went +5.0, +5.0, +5.0, +1.8, +9.0, +6.0 across five drafts). **QB -4** inside eff ADP 60, underpowered on its own but agreeing with the four managers who take their first QB in rounds 2.5–3.2. **RB moves by NOTHING — that is its measurement, not an omission:** -0.1, -2.2, +1.8, not significant in any band. **The "RB-heavy league" is real as an experience and its mechanism is receivers falling, not backs flying.** SNY: Josh Allen is drawn at **9**, not **17** — Snyder picks 9 and 16 and has taken him 4-for-4 when available, so his chance of reaching your 17 is ~3%.

→±n = this player's VOR is STALE and this is the current number. The board's projections are frozen at Aug 23 and cannot be rebuilt before the draft, so a few cells are badly out of date — **MarShawn Lloyd reads -90 and is really -44**, at your pick 89. Read the blue number, not the black one. Same source as the printed OVERRIDE CARD, so the two cannot disagree.

VOR and price sit side by side, and the GAP between them is not a signal — "big VOR, late pick, therefore bargain" was retired at rho -0.079 (n=324) and re-measured backwards at -0.17 (n=409). Read VOR down a round to see where value falls off; do not hunt gaps with it. Nothing here is coloured by that gap, on purpose. **NEWS OUT** = removed by the news overrides, drawn only because somebody in the room will still spend the pick. **Stops at round 12 on purpose** — only 144 of 480 carry a real draft position; your 152 and 161 are the D/ST and kicker. **A cell is a neighbourhood** (±12 picks), a column is nothing — only column 8 is yours. **The live board is what you draft from.**

DRAFT BOARD GRID 2 of 2 — ROUNDS 9-12, THE ROOM'S ORDER — WHERE YOU DECIDE

JUG, slot 8 · market **unknown (adp_vintage.txt unreadable)** · built Sep 06 2026, 17:39 · **\$4.13: take risk from round 9, never before.** A global upside tilt costs \$22-41 of expected payout; a round-9-and-later tilt is free. So these cells are twice the height and spend it on what the decision turns on. **Everything here is below replacement** — that is not a reason to skip it, it is why the ordering stops helping and the job flag starts. **\$4.20: buy the job, never the name.** The flag says a job is unresolved and what it is worth; measured on 19 unsettled backfields it has *no* opinion on who wins it, and neither should you.
