

TIER SHEET — our ranking, arranged by tier

One column per position, one row per tier, best first inside each cell. The green number is VOR (points above a replacement starter). The grey ~n is the pick he is expected to go at and b is his bye. Any tier with more than eight names is broken into **BY YOUR PICK n** blocks — everyone in a block is expected to be gone by that turn of yours. Your picks: 8 · 17 · 32 · 41 · 56 · 65 · 80 · 89 · 104 · 113 · 128 · 137 · 152 · 161. Tiers are the board's own, imported — not recomputed here.

RB	WR	TE	QB

How to use it: find the tier you are picking in, count how many names in it have a ~n below your next pick. If none do, the tier breaks before you come back and the choice is now. If several do, you can take the other position.

Tiers are the board's own, imported — not recomputed here. AVOID hurt or unavailable DISC injury flag BUY both analyst panels ahead of ADP OPEN unsettled backfield 3/3 / 1/3 a back carrying all three signals that measure — a real share of his team's targets, 13+ games last year, drafted in the NFL's first three rounds. Each one is worth about twelve points. 9g games he played in 2025, darker under ten — every game he missed is worth about two points off this year. 88% snaps / 40% snaps how much of his team's season he was actually on the field for, drawn only at the top and bottom of the league. **Red means he was not out there**, and it is the strongest receiver warning we have.
